EMBEDDED SYSTEMS CONFERENCE EXHIBITORS

MICROSOFT AND THE NEXT GENERATION OF DEVICE DEVELOPMENT

With over 10 years in the Embedded space, Windows Embedded offers the most productive set of tools and technologies and an active development community to give you the confidence that they will be successful in delivering the next generation of smart, connected, service-oriented devices to market—faster.

The Windows Embedded family of products offers a broad range of small-footprint embedded operating systems that have been deployed in demanding environments and that will continue to drive the next generation of leading consumer and enterprise experiences. With built-in networking support, Windows Embedded products provide you with the tools to quickly build service-oriented devices that easily connect to other devices, PCs, and services and that offer your customers an unparalleled, connected experience. Windows Embedded also gives you the confidence to deliver your device on

time without sacrificing customer needs by providing you with componentized and fully configured platforms as well as familiar Visual Studio application development tools.

Stay ahead of embedded market trends and changing requirements by choosing Windows Embedded for your next project. As the number one commercial embedded software platform in the world,* Windows Embedded offers a worldwide community of partners and resources to help you speed up the time it takes to bring your device to market as well as support you with creating the next generation of experiences for your customers.

*Venture Development Corporation, 2007
